Comment on egusphere-2022-685
Mauro Cacace (Editor)

Editor comment on "PySubdiv: open-source geological modelling and reconstruction by non-manifold subdivision surfaces" by Mohammad Moulaeifard et al., EGUsphere, https://doi.org/10.5194/egusphere-2022-685-EC1, 2022

Dear authors,

Thanks for your submission to GMD. Based on the referee comment, and on my own reading, I agree that the manuscript has its own scientific merit and the topic fits with the journal scope. However, I would suggest to carefully address all comments raised by the reviewer, especially those dealing with a clarification and distinction from an already published manuscript as well as on improving the code portability to the end user.

Yours,
Mauro Cacace
