Chief editor comment on "Hydrological modelling on atmospheric grids; using graphs of sub-grid elements to transport energy and water" by Jan Polcher et al., EGUsphere, https://doi.org/10.5194/egusphere-2022-690-CEC2, 2022

Dear authors,

Apologies for not realizing the storage of the code in Zenodo. In this way, you could consider that clearly adding information about an informal repository (Gitlab) in the section can confuse the readers. It could be a good idea to remove it. The Zenodo repository is under the CC-4.0 license, and therefore your code has already been released under such license. Therefore, there is no need to add the Cecil license.

An issue that I missed in the previous comment is about the hydrological elevation models; you state that they are available under request. We can not accept this, you must publish them in a repository with the paper. Please, do it. Otherwise, you need to provide evidence that forbids you from doing it.

Regards,

Juan A. Añel
