Comment on egusphere-2022-719

Juan Antonio Añel

Chief editor comment on "Estimation of CH₄ emission based on an advanced 4D-LETKF assimilation system" by Jagat S. H. Bisht et al., EGU sphere,
<https://doi.org/10.5194/egusphere-2022-719-CEC1>, 2022

Dear authors,

Unfortunately, after checking your manuscript, it has come to our attention that it does not comply with our "Code and Data Policy".

https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

You have archived the LETKF code on GitHub. However, GitHub is not a suitable repository. GitHub itself instructs authors to use other long-term archival and publishing alternatives, such as Zenodo. Also, the GitHub repository for LETKF does not include a license. If you do not include a license, despite what you state, the code can not be used by others, as it continues to be your property. Therefore, when uploading the model's code to the new repository, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file '<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code. Also, you can choose other options that Zenodo provides: GPLv2, Apache License, MIT License, etc.

About the MIROC model. We understand the reasons that preclude its publication. However, ideally, we should have evidence of proper internal storage by their developers. Therefore, please, provide additional detail on where and how the code is stored, and if possible, ask the developers to share a DOI for the version you use in this work.

Therefore, please, publish your code in one of the appropriate repositories, and reply to this comment with the relevant information (links and DOIs) as soon as possible, as it should be available for the Discussions stage. Also, you must include the modified 'Code and Data Availability' section in a potential reviewed version of your manuscript.

Please, be aware that failing to comply promptly with this request could result in rejecting

your manuscript for publication.

Regards,

Juan A. Añel

Geosci. Model Dev. Exec. Editor
