Comment on egusphere-2022-733

Simone Pilia (Editor)

Editor comment on "Seismic amplitude response to internal heterogeneity of mass-transport deposits" by Jonathan Ford et al., EGU sphere,
<https://doi.org/10.5194/egusphere-2022-733-EC1>, 2022

Dear authors,

many thanks for submitting your manuscript to Solid Earth.

I have now received evaluations by two expert reviewers that provided detailed comments. They are both fairly positive about the scientific significance of your manuscript and clarity of the writing. They have, however, raised a number of important issues that need to be addressed for further processing of your manuscript. In particular, Reviewer 2 has a number of criticisms about the complexity of your elastic models, and questions how they can be representative for your study.

I hope you will find the reviews constructive as I think they are, and look forward to seeing a revised version of the manuscript.

All the best,

Simone.
