Received and published: 4 October 2016

The chief editors of Earth System Dynamics (ESD) post this note to clarify issues related to the open review process and discussion phase of manuscripts in this journal.

1. The manuscript has not been accepted for publication in ESD. Its availability on this web page is part of an open and transparent scientific evaluation process.
2. The purpose of the discussion forum is to transparently evaluate the scientific content of the manuscript by other scientists. The forum is open only to scientific comments and reviews.
3. At the end of this process, the handling editor will decide whether or not this manuscript will be published in Earth System Dynamics or not.

Discussion paper

4. Comments that are not of scientific nature or of direct relevance to the issues raised in the manuscript or which contain personal insults can be removed by the editor.

5. Earth System Dynamics does not recommend media attention of manuscripts that are in the discussion phase, as these manuscripts are not scientifically evaluated regarding their contents. If suitable for media coverage, this is recommended to take place after a manuscript has been reviewed, accepted, and been published in Earth System Dynamics.
