Comment on esd-2021-87

Richard Rosen

Community comment on "ESD Ideas: A Global Warming Scaling Law" by Mikhail Verbitsky and Michael Mann, Earth Syst. Dynam. Discuss.,
<https://doi.org/10.5194/esd-2021-87-CC1>, 2021

Frankly, as a physicist, I don't know how to evaluate this paper since the main references for the methodology are so old that I do not have access to them. Also, there is no physics in the paper to support the main hypothesis (equation #1). So if this paper is seriously considered for publication it should have enough physics in it to demonstrate the hypotheses. Right now it seems rather speculative.
