Comment on essd-2020-391
Anonymous Referee #2

Referee comment on "Hydrometeorological dataset of West Siberian boreal peatland: a 10-year record from the Mukhrino field station" by Egor Dyukarev et al., Earth Syst. Sci. Data Discuss., https://doi.org/10.5194/essd-2020-391-RC2, 2021

This paper is a rarity in its completeness and excellence. As a data description paper, it does an outstanding job of describing all aspects of the dataset expertly. The site is described well, the instrumentation is all thoroughly cataloged, the data are available via the links provided, and summary statistics are presented clearly and completely. The scientific conclusions would be insufficient for other research journals, but again, as a data introduction paper, this is an excellent piece. I recommend publication as-is.
