Editor comment on "Fusing MODIS and AVHRR products to generate a global 1-km continuous NDVI time series covering four decades" by Xiaobin Guan et al., Earth Syst. Sci. Data Discuss., <https://doi.org/10.5194/essd-2021-156-EC2>, 2021

Dear authors,

Thanks for your careful replies to the reviewers' comments. While the referees find your work of some interest, they in particular raise concerns about no temporal changes in sub-pixel variation and the reliability of interannual and seasonal variations. Your replies have not addressed their comments well at present. Overall, I feel that the concerns from reviewers are sufficiently important to generate a reliable and accurate dataset sufficient for a paper in ESSD.

I am sorry that I cannot be more positive on this occasion. I hope that you will find our referees' comments helpful when improving your dataset and revising your paper for submission elsewhere.

Yours sincerely

Bo Zheng
