Comment on essd-2021-280

Ting Nie

Community comment on "A multi-dimensional dataset of Ordovician to Silurian graptolite specimens for virtual examination, global correlation and shale gas exploration" by Hong-He Xu et al., Earth Syst. Sci. Data Discuss., <https://doi.org/10.5194/essd-2021-280-CC4>, 2021

It's thrill to see the work about the database guarantees multidimensional information of the fossil records. No doubt that the database empowered the research of palaeontology and the application in the shale gas exploration. More are supposed to come to publish in the future. Looking forward to the development of data-driven research in the field of palaeontology.
