Comment on **essd-2021-32**

Panagiotis Agrafiotis (Referee)

Referee comment on "Comprehensive bathymetry and intertidal topography of the Amazon estuary" by Alice César Fassoni-Andrade et al., Earth Syst. Sci. Data Discuss., <https://doi.org/10.5194/essd-2021-32-RC3>, 2021

I read the article with great interest and for sure it contributes to the domain. Data are quite difficult to capture and releasing them freely available and online is of high importance. Some questions and remarks can be found in the attached PDF file. I am suggesting major revisions since i believe that authors should clarify some parts of the text under question and revise the text for english language.

Please also note the supplement to this comment:
