Community comment on "Pre- and post-production processes increasingly dominate greenhouse gas emissions from agri-food systems" by Francesco N. Tubiello et al., Earth Syst. Sci. Data Discuss., https://doi.org/10.5194/essd-2021-389-CC1, 2021

Question rather than comment. Layman’s question at that - apologies in advance… I’m struggling with the amount of stuff published on FALU/food, agriculture and food systems! A simple question I came across a stat that 80% of agricultural emissions (so not food supply) come from meat, dairy and rice - is this correct? Next what is your estimate of FALU only emissions currently i.e. land use change, agriculture, farming, livestock and crops. Thank you.
