Community comment on "A data-driven topsoil δ13C dataset and the drivers of spatial variability across the Tibetan Plateau" by Yunsen Lai et al., Earth Syst. Sci. Data Discuss., https://doi.org/10.5194/essd-2021-411-CC1, 2022

This manuscript reported the topsoil δ13C dataset across the Tibetan Plateau. The dataset is important, however, the authors did not provide the information of soil organic carbon content and the δ13C of vegetation, which is essential for exploring the drivers of spatial variability of soil δ13C.
