Community comment on "A data-driven topsoil $\delta^{13}\text{C}$ dataset and the drivers of spatial variability across the Tibetan Plateau" by Yunsen Lai et al., Earth Syst. Sci. Data Discuss., <https://doi.org/10.5194/essd-2021-411-CC1>, 2022

This manuscript reported the topsoil $\delta^{13}\text{C}$ dataset across the Tibetan Plateau. The dataset is important, however, the authors did not provide the information of soil organic carbon content and the $\delta^{13}\text{C}$ of vegetation, which is essential for exploring the drivers of spatial variability of soil $\delta^{13}\text{C}$.
