Thank you very much for your revision suggestions.

1. In the "Materials and methods" section, methods of equation collection from the literatures were illustrated in "2.1 Literature retrieval" and "2.2 Equation collection and screening". Methods to create equations with field measured data were illustrated in "2.3 Equation creation and evaluation".

2. In the "Equation" sheet, we arranged information most directly related to equations, such as predictor variables, equation forms, equation coefficients and statistical parameters in equation evaluation, etc. Therefore, other information not most directly related to equations can be found in the "General" sheet through retrieval.

3. Description of abbreviations such as “H”, “C”, “Ac”, “D”, “M” in the "Equation" sheet were added in the "Description" sheet.
