Comment on **essd-2021-48**

Anonymous Referee #4

Referee comment on "Baseline data for monitoring geomorphological effects of glacier lake outburst flood: a very-high-resolution image and GIS datasets of the distal part of the Zackenberg River, northeast Greenland" by Aleksandra M. Tomczyk and Marek W. Ewertowski, Earth Syst. Sci. Data Discuss., <https://doi.org/10.5194/essd-2021-48-RC4>, 2021

please find my review attached. While it is an interesting dataset, I doubt its replicability since it is in a moving terrain and has no DGPS GCPs. Furthermore it is as far as I understand already published (in 2 journal papers and 2 zenodo repositories) and hence does not warrant an additional publication in my opinion.

Please also note the supplement to this comment:
