Update on SURF_CLI_CHN_MUL_DAY

Zhen Hao et al.

Author comment on "CCAM: China Catchment Attributes and Meteorology dataset" by
Zhen Hao et al., Earth Syst. Sci. Data Discuss.,
<https://doi.org/10.5194/essd-2021-71-AC8>, 2021

SURF_CLI_CHN_MUL_DAY has been public for many years. Without warning, SURF_CLI_CHN_MUL_DAY has just stopped sharing. We don't know the reason. In order to make up for the lack of SURF_CLI_CHN_MUL_DAY data, mainly to meet the goal of calculating the time series data of any given river basin, we wrote a new program on Github to calculate the meteorological time series of any river basin based on the data we published in Zenodo. Description on the GitHub page:

(20210906) SURF_CLI_CHN_MUL_DAY has just been closed for sharing. If you have SURF_CLI_CHN_MUL_DAY data downloaded or SURF_CLI_CHN_MUL_DAY may be made public again in the future, the code meteorological_series.py for calculating the watershed climate time series can still be used. If not, the meteorological time series from 1990 to 2020 for any given basin can still be calculated based on our released data using meteorological_release.py. The principle is to calculate the overlapping areas of the given watershed and the watersheds we have prepared, and then calculate the meteorological time series of the given watershed by weighting.
