Comment on essd-2021-86 from Topical Editor

Miao Zhang et al.

Author comment on "GCI30: a global dataset of 30□m cropping intensity using multisource remote sensing imagery" by Miao Zhang et al., Earth Syst. Sci. Data Discuss., <https://doi.org/10.5194/essd-2021-86-AC3>, 2021

Dear Authors,

I still have two comments for #5 and #6. Regarding #5, it is not uncertainty. It sounds like quality indicator. Regarding #6, my suggestion is to add a table of CI statistics from different products. It will be of great help to provide such table at the country level in SI. I will send it out for review now to speed the process. But please address these two comments together with comments from reviewers when you have them and if you receive a decision of revision.

#5. The uncertainty or quality of the data should be added in the product. As seen from this paper, the spatial variation of uncertainty is significant.

#6. A result table of comparison with other studies can be added. It is difficult to evaluate the difference of this product with other studies based on current presentation.
