Community comment on "GCI30: a global dataset of 30□m cropping intensity using multisource remote sensing imagery" by Miao Zhang et al., Earth Syst. Sci. Data Discuss., <https://doi.org/10.5194/essd-2021-86-CC2>, 2021

Dear Authors,

I'd like to raise another question after I downloaded a couple of tiles of data. The whole image was divided into 504 tiles that seems too many to search and download. Is it possible to aggregate some tiles into the continent level and then there are only less 10 large images. You may consider to keep 504 tiles and add new continent level images online. I assume that the latter approach will facilitate the user to download the images for large area study.

Thanks

Jinlong Fan
