Citation of R packages
Jean-Pierre Gattuso

While I am reading your interesting contribution, I note that you have used an R package without a proper citation. It is important to give credit to authors of packages who make their work openly accessible to the community but few people know how to do it.

R has a function to find out how a specific package should be cited: `citation(package = "package name")`. For example, for the seacarb, `citation(package = "seacarb")` returns:

To cite package 'seacarb' in publications use:

A BibTeX entry for LaTeX users is

@Manual{,
  title = {seacarb: Seawater Carbonate Chemistry},
  author = {Jean-Pierre Gattuso and Jean-Marie Epitalon and Heloise Lavigne and James Orr},
  year = {2021},
  note = {R package version 3.3.0},
  url = {https://CRAN.R-project.org/package=seacarb},
}

That being said, I will now continue reading your paper!
