Comment on essd-2022-343
Salvatore Marullo (Editor)

Editor comment on "Southern Europe and Western Asia Marine Heat Waves (SEWA-MHWs): a dataset based on macro events" by Giulia Bonino et al., Earth Syst. Sci. Data Discuss., https://doi.org/10.5194/essd-2022-343-EC2, 2022

Considering your response to the editor's comments and the generally positive comments of the reviewers, I have decided to ask the authors to submit a revised version of the article that takes into account all the comments of the two referees replying directly to each question and/or modifying the article where requested. In particular I suggest to answer in detail to the first referee about the paragraph that is closed by the sentence "...The significance of the dataset itself, in my opinion, is thus limited."
