Comment on essd-2022-67

Anonymous Referee #1

Referee comment on "Downscaled hyper-resolution (400□m) gridded datasets of daily precipitation and temperature (2008–2019) for the East–Taylor subbasin (western United States)" by Utkarsh Mital et al., Earth Syst. Sci. Data Discuss., <https://doi.org/10.5194/essd-2022-67-RC1>, 2022

The paper presents a methodology to downscale precipitation data using topography as a covariate. The paper is technically sound and it presents a pragmatic and robust methodology for downscaling.
