Comment on esurf-2021-27

Jens Turowski (Editor)

Editor comment on "Escarpment retreat rates derived from detrital cosmogenic nuclide concentrations" by Yanyan Wang and Sean D. Willett, Earth Surf. Dynam. Discuss., <https://doi.org/10.5194/esurf-2021-27-EC1>, 2021

Dear authors,

we have now received two reviews of the paper, both of which are generally supportive of its publication. Both reviewers agree that some methodological background information on measuring erosion rates from cosmogenic nuclides are unnecessary in the context of the paper and that the corresponding sections can be shortened. Otherwise, the comments are relatively minor, asking for clarifications, additional details, and language improvements.

Please supply a response to the comments together with your revisions.

Thanks and looking forward to reading your revised paper!

Jens Turowski
