Comment on esurf-2021-36

Anonymous Referee #1

Referee comment on "An Update on Techniques to Assess Normal Mode Behavior of Rock Arches by Ambient Vibrations" by Mauro Häusler et al., Earth Surf. Dynam. Discuss., <https://doi.org/10.5194/esurf-2021-36-RC2>, 2021

I shall add to the review letter submitted earlier that this letter was based on a different manuscript version (still downloaded from the website just upon being nominated as referee) than the one, which is available, now. However, the main arguments I made in my letter still hold, also for the currently available manuscript version. I can understand if the authors consider some of the detailed comments from the list after the general issues irrelevant, especially if these refer to typos or smaller caveats.
