Referee comment on "The Landslide Velocity" by Shiva P. Pudasaini and Michael Krautblatter, Earth Surf. Dynam. Discuss., https://doi.org/10.5194/esurf-2021-81-RC1, 2021

General comments
This manuscript presented a simple and physics-based general analytical landslide velocity model which helps solve more landslide problems. The logic of the manuscript is clear, and the structure is reasonable, but there are still some problems.

Specific comments
1. In my opinion, the title of this manuscript should be modified. You can make it more specific. It can't be seen from the current title that what you introduce in your article is related to landslide speed model.
2. Figure 3 is the combination of Figure 1 and Figure 2. There is no need to draw it again.
3. The conclusion could have been a little more concise and organized. It can be divided into 1, 2 and 3 points.
