Comment on esurf-2022-61

Stephen Laubach

Community comment on "Standardized field methods for fracture-focused surface processes research" by Martha Cary Eppes et al., Earth Surf. Dynam. Discuss., <https://doi.org/10.5194/esurf-2022-61-CC1>, 2022

A compilation and review of fracture analysis field methods for surface processes research ought to be a valuable contribution and within the scope of this journal.

I enjoyed this MS and I think it's a valuable contribution.

The paper is well written and clearly illustrated.

There are several places in the text, noted below, where clarifications are needed. My comments are in the attached pdf
