Editor comment on "Measurements of natural airflow within a Stevenson screen and its influence on air temperature and humidity records" by Stephen Burt, Geosci. Instrum. Method. Data Syst. Discuss., <https://doi.org/10.5194/gi-2021-31-EC2>, 2022

It is very kind of Dr. Bell to have provided this feedback. The reason that she was unable to post a review is because she never accepted our invitation to review. It would be best if she did this, in order to have the chance to remain anonymous and the review registered in our system as such, and therefore to submit a full referee report. While I have no reason to doubt that this review was indeed written by Dr. Bell, I am sure that you can see the general problem of providing one's own referee comments!

Could you let Dr. Bell know that, in the future, she may accept the invitation in the automated email, and that we can also answer any questions when she has an item of confusion over how the system works.

Sending thanks to both of you.
