Dear authors,

please note, that if only one model is concerned, the title of a GMD manuscript should state the model name (or its acronym) and a version number. These are always important to know even in the case of an evaluation, as different versions might perform differently for the same evaluation procedure. Therefore please change the title of your manuscript accordingly upon revision; e.g., "Quantifying uncertainties due to chemistry modeling – evaluation of tropospheric composition simulations in the CAMS model (version x.y)"

Discussion paper

Additionally, please note that evaluation papers also need to include a code availability section, telling the reader how to access the exact code version of the evaluated model or providing profound reasons why the code can not be accessed. Furthermore, please provide reasons, why the data is not freely available.

Best regards,

Astrid Kerkweg
