Dear Editor,

Thank you for your comments. To meet the requirement of GMD, we uploaded the code, data, and scripts used to generate the figures on Zenodo with a doi 10.5281/zenodo.4387038. We can also upload the code and sample data as a supplement (less than 20M) during the manuscript revision.

Although we carefully checked out the code and applied it to model evaluations. The code may still contain bugs. If it is acceptable, we would like to keep the GitHub link

in the code availability section after uploading the code and data as a supplement. In doing so, we can update the code in GitHub in the future if we or users find new bugs.

Yours,

Zhongfeng Xu on behalf of all Co-Authors
