Comment on gmd-2020-377

Juan Antonio Añel

Chief editor comment on "A permafrost implementation in the simple carbon–climate model Hector v.2.3pf" by Dawn L. Woodard et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2020-377-CEC1>, 2021

Dear authors,

Please, in the next step of the review process, be sure that you fix the following issues with your paper:

- The code of the model must be stored in a permanent archive—for example, Zenodo. Github is not a repository acceptable for purposes of long-term storage.
- You must include the version of the model that you use in the title of the manuscript.

Best regards,

Juan A. Añel
Geosc. Mod. Dev. Executive Editor
