Comment on gmd-2020-378
Juan Antonio Añel

Chief editor comment on "Turbidity maximum zone index: a novel model for remote extraction of the turbidity maximum zone in different estuaries" by Chongyang Wang et al., Geosci. Model Dev. Discuss., https://doi.org/10.5194/gmd-2020-378-CEC1, 2021

Dear authors,

We have checked the 'Code and data availability' section of your manuscript. We would like to request you some additional information about the LandSat images used in your work. A good way of doing it would be adding the Metadata files that Glovis provides when you get an image as supplementary information to your manuscript, as it includes the version of the software used to produce it, exact time, data product, etc. Another way can be storing them in an external repository that we can accept, such as Zenodo.

Regards,
Juan A. Añel
Geosc. Mod. Dev. Exec. Editor
