Dear Klaus,

I would like to point out that the second sentence in your abstract is incorrect. CanESM5 has a 50-member ensemble of simulations from 1850 to 2100 following historical forcings from 1850 to 2015 and SSP1-1.0, SSP1-2.6, SSP2-4.5, SSP3-7.0 and SSP5-8.5. All of this output is available on the ESGF and you can find the documenting paper here: . In addition, a 10-member ensemble of CanESM5 simulations is available on the ESGF based on CMIP5 historical forcings and RCPs.

With best regards,
John Fyfe
