Comment on gmd-2020-436
Juan Antonio Añel

Chief editor comment on "CM2Mc-LPJmL v1.0: biophysical coupling of a process-based dynamic vegetation model with managed land to a general circulation model" by Markus Drüke et al., Geosci. Model Dev. Discuss., https://doi.org/10.5194/gmd-2020-436-CEC1, 2021

Dear authors,

After checking the Code and Data availability section of your manuscript, unfortunately, it is not acceptable. You must provide the code and data during the review process. If the source code is freely available, it is necessary to publicly and persistently archive it following the GMD policy. If it can not be published, it is not "freely available", and it is necessary to indicate the licence conditions in the manuscript.

Therefore, please, make both code and data available in a long-term and trustful repository, as requested in our editorial policy (e.g., Zenodo). You must do it as soon as possible (before the end of the interactive discussion). Then, please, publish a reply to this comment with the relevant information, including the D.O.I. Also, you mention that the code is under an "open-source" license. Please, include it with the code.

Regards,
Juan A. Añel
Geosc. Mod. Dev. Executive Editor
