Comment on gmd-2021-102

Juan Antonio Añel

Chief editor comment on "ISWFoam: a numerical model for internal solitary wave simulation in continuously stratified fluids" by Jingyuan Li et al., Geosci. Model Dev. Discuss., https://doi.org/10.5194/gmd-2021-102-CEC1, 2021

Dear authors,

After checking your manuscript, it has come to our attention that it does not comply with our Code and Data Policy.
https://www.geoscientific-model-development.net/policies/code_and_data_policy.html
You have archived your code in GitHub. However, GitHub is not a suitable repository. GitHub itself instructs authors to use other alternatives for long-term archival and publishing, such as Zenodo (GitHub provides a direct way to copy your project to a Zenodo repository). Therefore, please, publish your code in one of the appropriate repositories.

In this way, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section, the DOI of the code. Also, ISWFoam is based on OpenFoam, and OpenFoam is released under a GPLv3 license. This means that you must release ISWFoam under the GPLv3 license. Therefore, when you upload the ISWFoam code to one of the repositories you need to include the file 'https://www.gnu.org/licenses/gpl-3.0.txt' as LICENSE.txt with your code. Also, you have to choose such licence or 'other' if it is not listed, from the list of available licenses.
