Author comment on "A physically based distributed karst hydrological model (QMG model-V1.0) for flood simulations" by Ji Li et al., Geosci. Model Dev. Discuss.,
<https://doi.org/10.5194/gmd-2021-120-AC2>, 2022

Dear reviewer:

We greatly appreciate the reviewer's comments. The reviewer point out that there are two major deficiencies in this manuscript, in part depending upon the English language errors and in part by the scientific content problems. We have carefully revised the problems pointed out by the reviewer. Our point-by-point response to specific comments can be found in the supplement (a point-by-point reply to the comments, a marked-up manuscript and the final paper). Many thanks for helping to review the manuscript and best wishes!

Ji Li
