Editor comment on "Capturing the interactions between ice sheets, sea level and the solid Earth on a range of timescales: a new "time window" algorithm" by Holly Kyeore Han et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-126-EC1>, 2021

Dear Dr. Han and co-authors,

Following the two positive and constructive reviews, for which I thank the referees, I am happy to recommend that you start preparing the revisions of your manuscript draft. Depending on your preferences and timeline, you may include these revisions in the interactive Author's Response, or may simply describe how you intend to address them and wait for the formal submission of the revised manuscript to indicate your changes.

Best wishes and please do be in touch with any questions,

Andy
