Comment on gmd-2021-134

Juan Antonio Añel

Chief editor comment on "A Regional multi-Air Pollutant Assimilation System (RAPAS v1.0) for emission estimates: system development and application" by Shuzhuang Feng et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-134-CEC1>, 2021

Dear authors,

After checking your manuscript, it has come to our attention that it does not comply with our Code and Data Policy.

https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

In the Code and Data Availability section, you state, "The code of this system can be obtained on request from the corresponding author". However, this is not acceptable for papers intending to be published in Geosc. Mod. Dev. You must publish the RAPAS v1.0 code in one of the appropriate repositories.

In this way, before the Discussions stage is closed, you must reply to this comment with the link to the repository for the code and the corresponding DOI.

Also, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section and the DOI of the code. Also, please, include a license for RAPAS v1.0. If you do not include a license, the code continues to be your property and can not be used by others. Therefore, when uploading the model's code to the repository, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file '<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code. Also, you can choose other options: GPLv2, Apache License, MIT License, etc.

In the meantime, please reply as soon as possible to this comment with its link so that it is available for the peer-review process, as it should be.

Juan A. Añel
Geosc. Mod. Dev. Executive Editor
