Comment on gmd-2021-140

Anonymous Referee #1

Referee comment on "Computation of backwater effects in surface waters of lowland catchments including control structures – an efficient and re-usable method implemented in the hydrological open-source model Kalypso-NA (4.0)" by Sandra Hellmers and Peter Fröhle, Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-140-RC1>, 2021

The contribution is in line with the aims and scope of GMD. The paper represent a sufficiently substantial advance in modelling science? The consideration of backwater effects like realized is a novel aspect of modelling. The methods and assumptions are valid and clearly outlined. Nevertheless some additional remarks could be useful (see detailed comments in the supplement). Alltogether a minor revision is recommended.

Please also note the supplement to this comment:
