Comment on gmd-2021-219

Juan Antonio Añel

Chief editor comment on "Evaluating the assimilation of S5P/TROPOMI near real-time SO₂ columns and layer height data into the CAMS integrated forecasting system (CY47R1), based on a case study of the 2019 Raikoke eruption" by Antje Inness et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-219-CEC1>, 2021

Dear authors,

After checking your manuscript, it has come to our attention that it does not comply with our Code and Data Policy.

https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

The "Code and Data Availability" section of your manuscript does not contain the relevant information about accessing the code you use in your work. We require long-term archival and publishing of it. For example, in the manuscript, you mention the retrieval algorithms developed and used for this work several times. This kind of information is essential. Therefore, to continue with evaluating your manuscript, you must make available all the code you have used. It should be made public in one of the suitable repositories described in our policy (for example, Zenodo).

In this way, before the Discussions stage is closed, you must reply to this comment with the link to the repository for the code and the corresponding DOIs.

Also, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section and the DOI of the code.

Please, be aware that if you do not include a license, the code continues to be your property and can not be used by others. Therefore, when uploading the model's code to the repository, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file

'<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code. Also, you can choose other options that Zenodo provides: GPLv2, Apache License, MIT License, etc.

Please, reply as soon as possible to this comment with the link for it so that it is available for the peer-review process, as it should be.

Juan A. Añel
