Comment on gmd-2021-222

Juan Antonio Añel

Chief editor comment on "Use of Genetic Algorithms for Ocean Model Parameter Optimisation" by Marcus Falls et al., Geosci. Model Dev. Discuss.,
<https://doi.org/10.5194/gmd-2021-222-CEC1>, 2021

Dear authors,

After checking your manuscript, it has come to our attention that it does not comply with our Code and Data Policy.

https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

First, you have to identify clearly what NEMO version you have used and include the citation of the corresponding Zenodo repository (NEMO has several as cited in its webpage). Also, in the tile of the manuscript, you have to be more specific about your work, including a sentence such as "...: a case study using PISCES 1d (Vx.y)". The NEMO code used should be in an open repository. You can upload it to ZENODO as part of its documentation is already hosted there.

You have archived your configuration files and Pisces1D code in an internal GitLab installation that requests to send an email to get access to them. We do not accept this. Please, upload your configuration files and code to one of the appropriate repositories that we list in our policy.

Before the Discussions stage is closed, you must reply to this comment with the link to the repository for the code and the corresponding DOI. It would be best to do it as soon as possible so that potential reviewers can have the material necessary for the process.

Also, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section, including the DOI for the code/repository.

Also, as we have not accessed the Pisces1D code, it has not been possible to check its license. Be aware that if you do not include a license, the code continues to be your property and can not be used by others. Therefore, when uploading the model's code to the chosen repository, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file '<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code. Also, you can choose other options that Zenodo provides: GPLv2, Apache License, MIT License, etc. NEMO is released under the CeCILL v2.0 license, GNU GPL compatible, so you can do it without problems.

Juan A. Añel
