Comment on gmd-2021-240

Juan Antonio Añel

Chief editor comment on "Integration-based extraction and visualization of jet stream cores" by Lukas Bösiger et al., Geosci. Model Dev. Discuss.,
<https://doi.org/10.5194/gmd-2021-240-CEC1>, 2021

Dear authors,

Checking your manuscript, it has come to my attention that it does not comply with our Code and Data Policy.

https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

You have archived your code in a non-permanent repository. Moreover, the link that you provide does not work anymore. Also, you state that upon acceptance, the code will be made available in GitHub. However, GitHub is not a suitable repository. GitHub itself instructs authors to use other alternatives for long-term archival and publishing, such as Zenodo. Therefore, please, publish your code in one of the appropriate repositories, and include the relevant primary input/output data. In this way, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section, the DOI of the code (and another DOI for the dataset if necessary).

Also, if you have not licensed your code, please, do it. If you do not include a license, the code continues to be your property and can not be used by others. Therefore, when uploading the model's code to Zenodo, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file '<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code. Also, you can choose other options that the different repositories provide: GPLv2, Apache License, MIT License, etc.

In the meantime, please, reply to this comment with its link so that it is available for the peer-review process.
