Comment on gmd-2021-26

Astrid Kerkweg

Chief editor comment on "Efficient ensemble generation for uncertain correlated parameters in atmospheric chemical models: a case study for biogenic emissions from EURAD-IM version 5" by Annika Vogel and Hendrik Elbern, Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-26-CEC1>, 2021

Dear authors,

in my role as Executive editor of GMD, I would like to bring to your attention our Editorial version 1.2:

<https://www.geosci-model-dev.net/12/2215/2019/>

This highlights some requirements of papers published in GMD, which is also available on the GMD website in the 'Manuscript Types' section:

http://www.geoscientific-model-development.net/submission/manuscript_types.html

In particular, please note that for your paper, the following requirements have not been met in the Discussions paper:

- "The main paper must give the model name and version number (or other unique identifier) in the title."
- "If the model development relates to a single model then the model name and the version number must be included in the title of the paper. If the main intention of an article is to make a general (i.e. model independent) statement about the usefulness of new development, but the usefulness is shown with the help of one specific model, the model name and version number must be stated in the title. The title could have a form such as, "Title outlining amazing generic advance: a case study with Model XXX (version Y)"."

As you are using EURAD-IM to show the performance of the ensemble, please add something like "a case study using EURAD-IM version x.y" to the title of your manuscript.

Additionally, please note, that as you are using EURAD-IM to produce the results shown in your article, the information how to access the EURAD-IM code is also required, including the permanent archiving of the exact EURAD-IM version the results of this articles have been created with.

Yours, Astrid Kerkweg
