Comment on gmd-2021-271

Juan Antonio Añel

Chief editor comment on "Predicting global terrestrial biomes with the LeNet convolutional neural network" by Hisashi Sato and Takeshi Ise, Geosci. Model Dev. Discuss., https://doi.org/10.5194/gmd-2021-271-CEC1, 2021

Dear authors,

I have checked your manuscript, and it is necessary to fix several issues. First, you use the LeNet CNN, however you do not mention its name or version in the tile. Please, do it; currently, the title is too generic. Also, you do not include the code of the CNN with your paper, but only the input data and a description in the Supplement. To comply with the Code and Data policy, you must provide the code of the CNN and include the relevant information in the 'Code and Data Availability' section.
Please, reply as soon as possible to this comment so that the necessary information is available for the peer-review process, as it should be.
