Comment on gmd-2021-275

Juan Antonio Añel

Chief editor comment on "A new snow module improves predictions of the isotope-enabled MAIDENiso forest growth model" by Ignacio Hermoso de Mendoza et al., Geosci. Model Dev. Discuss., https://doi.org/10.5194/gmd-2021-275-CEC1, 2021

Dear authors

After checking your manuscript, it has come to our attention that it does not comply with our Code and Data Policy.
https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

Your manuscript reads "The MAIDENiso code will be made available upon publication of this paper." We can not accept this. You must publish the code in one of the appropriate repositories. Be aware that if you fail to do it, we will have to reject your manuscript.

In this way, before the Discussions stage is closed, you must reply to this comment with the link to the repository for the code and the corresponding DOI.
Also, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section. Please, remember to include a suitable license for the MAIDENiso code. If you do not include a license, the code continues to be your property and can not be used by others. Therefore, when uploading the model's code to the repository, you could want to choose a free software/open-source (FLOSS) license. We recommend the GPLv3. You only need to include the file 'https://www.gnu.org/licenses/gpl-3.0.txt' as LICENSE.txt with your code. Also, you can choose other options that Zenodo provides: GPLv2, Apache License, MIT License, etc. Please, reply as soon as possible to this comment with the link for it so that it is available for the peer-review process, as it should be.

Regards,

Juan A. Añel

Geosc. Mod. Dev. Executive Editor
