Dear Prof. Juan A. Añel,

thank you for your hints regarding code accessibility and licences. We agree that this is very important and will do our best to resolve these issues.

One question of clarification, however: we assume for the moment that it would be best to address these issues after the interactive discussion has concluded, when we revise the manuscript, so that we don't have to change the manuscript during the interactive discussion. If that is, however, incorrect, and you want us to address these issues right away, please let us know.

Sincerely,

Florian Hartig
