Chief editor comment on "Climate and parameter sensitivity and induced uncertainties in carbon stock projections for European forests (using LPJ-GUESS 4.0)" by Johannes Oberpriller et al., Geosci. Model Dev. Discuss.,
<https://doi.org/10.5194/gmd-2021-287-CEC2>, 2021

Dear Prof. Hartig,

All these issues have to be addressed during the Discussions stage. In the publications of the EGU, the Discussions stage works as an open review. In this way, anyone must have access to any code and data relevant to the paper in Discussions. The code is or at least can be reviewed by the editors, reviewers and any other person. Also, the paper could finally be rejected for publication; however, the submitted version will remain published in Geosc. Mod. Dev. Discussions. In this way, to make sense of the Discussions version, the code and data must remain published too. This is why both must be published in a permanent and non-erasable repository. Therefore, please, address as soon as possible the issues that I mentioned before.

Best regards,

Juan A. Añel

Geosc. Mod. Dev. Executive Editor
