Author comment on "PARASO, a circum-Antarctic fully coupled ice-sheet–ocean–sea-ice–atmosphere–land model involving f.ETISH1.7, NEMO3.6, LIM3.6, COSMO5.0 and CLM4.5" by Charles Pelletier et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-315-AC1>, 2021

Dear Chief Editor,

Thank you for your comment. The reason why this appears as such in this first submission is that we were waiting to get a GMDD DOI prior to uploading a snap of the full sources to the RedC, for referencing. It has now been uploaded, and the following mention will appear in the forthcoming revision(s):

The full PARASO sources are on the CLM-Community RedC (<https://redc.clm-community.eu/> -> COSMO-CLM -> "Downloads").

Best regards,

Charles Pelletier
