Author comment on "On the impact of dropsondes on the ECMWF Integrated Forecasting System model (CY47R1) analysis of convection during the OTREC (Organization of Tropical East Pacific Convection) field campaign" by Stipo Sentić et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-354-AC1>, 2021

Dear Dr Zeng,

Since the ECMWF IFS model is proprietary, we are not able to share the code with the community. However, would you accept the open source version of the code? There is a publicly available IFS code that can be shared with the community (<https://www.ecmwf.int/en/research/projects/openifs>), but we cannot share the operational version which is proprietary.

Please advise us if we can proceed with the open source version of the code, or if you still do not find that acceptable?!

Kind regards,

Stipo
