Comment on gmd-2021-354

Yuefei Zeng (Editor)

Editor comment on "On the impact of dropsondes on the ECMWF Integrated Forecasting System model (CY47R1) analysis of convection during the OTREC (Organization of Tropical East Pacific Convection) field campaign" by Stipo Sentić et al., Geosci. Model Dev. Discuss., <https://doi.org/10.5194/gmd-2021-354-EC1>, 2021

Dear authors,

It is found that your manuscript does not comply with our Code and Data Policy:

https://www.geoscientific-model-development.net/policies/code_and_data_policy.html

Several links are given in the Code Availability and Data Availability sections (suggestion: use the target url at Zenodo instead of doi for easy access). However, the source code of the ECMWF IFS model is not included. You may ask the model developers to storage the model version used in your work in one permanent open access repository. Or you could offer to do it for them, given that they make it freely downloadable. In addition, a license for the use of the code must be included. In case that the code is not available for the public use, please make a statement.

You must reply to this comment before the Discussions stage ends. Also, you must include in a potential reviewed version of your manuscript the modified 'Code and Data Availability' section.

Yuefei Zeng
