Chief editor comment on "Multiphase processes in the EC-Earth Earth System model and their relevance to the atmospheric oxalate, sulfate, and iron cycles" by Stelios Myriokefalitakis et al., Geosci. Model Dev. Discuss., https://doi.org/10.5194/gmd-2021-357-CEC2, 2021

Dear authors,

Many thanks for the much-improved Code and Data Availability section. However, I still have a little concern about the data. Both the AERONET and the INDAAF websites are not trustable repositories for long-term archival, and nothing prevents that the URLs are discontinued in the future. Both AERONET and INDAAF do not have any request or legal condition in their web pages that prevents you from archiving the data you have downloaded in an open repository. Therefore, I kindly request you to upload the data that you have obtained from these sites, and used for your work, to the Zenodo repository.

Best regards,

Juan A. Añel

Geosc. Mod. Dev. Executive Editor
