Dear authors,

Many thanks for making your code and data available in the Dataverse repository. However, I have found an additional problem: There is no license listed. If you do not include a license, the code is not FLOSS (free-libre open-source); it continues to be your property. Therefore, you should choose a FLOSS license and add it to your repository so that it applies to all the code. We recommend the GPLv3. You only need to include the file '<https://www.gnu.org/licenses/gpl-3.0.txt>' as LICENSE.txt with your code. Also, you can choose other options that Zenodo provides: GPLv2, Apache License, MIT License, etc. Also, we can not accept the UCAR/NCAR repository. I understand that the ARTMIP outputs are too big to be copied to another repository. However, you should store on a different one at least a minimum set of final fields/variables that you have used for your work, not complete model outputs. Please, address these additional issues as soon as possible.

Regards,

Juan A. Añel
